Systems

Above All

About Us

A global leader in the development of sophisticated, cost-effective and highly competitive telematics solutions for remote monitoring and tracking

Company Highlights

Global Presence

Over: 100 distributors;
55 countries; 50 logistic
partners, 500K units sold

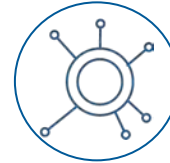

Established Company

15+ Years' Experience
Traded on London Stock
Exchange

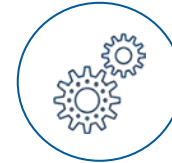

ISO-9001:2015 Certified

Field proven with Global
Certification (FCC E-24 &
EMC)

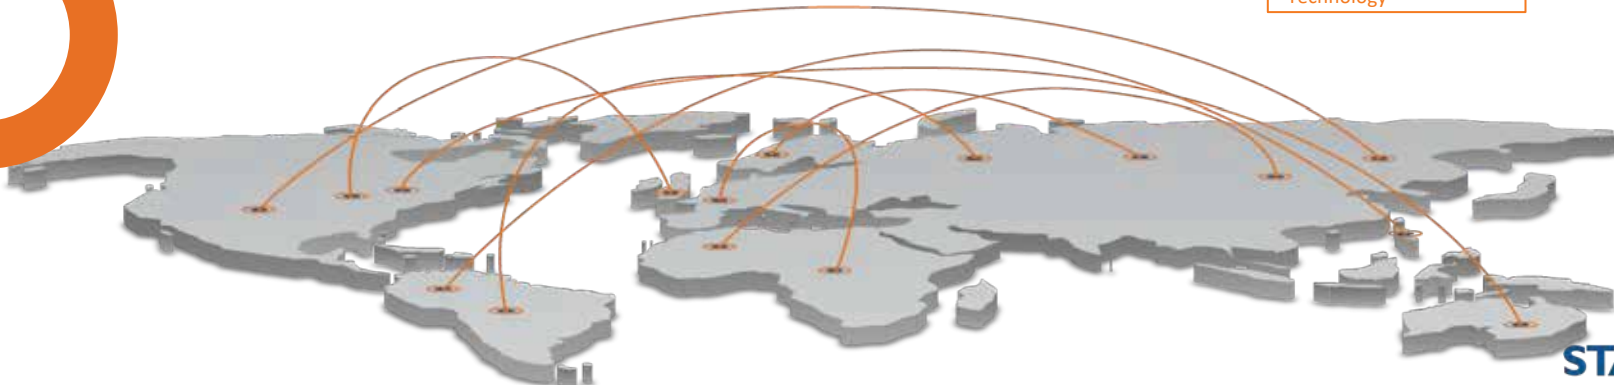

Technology Partner

Gilat Satellite Networks
Iridium Distributor &
Technoton Fuel Sensors

Latest Technologies

GPS/GLONASS &
2G, 3G & 4G-LTE Cellular
Technology

Benefits for end users

-  Control
-  Security
-  Responsiveness
-  Efficiency
-  Accountability
-  Peace of Mind

VIOLATION**

**BLUETOOTH
CONNECTIVITY**

Cellular connectivity and satellite positioning for product monitoring from anywhere in the world and includes starcom's unique algorithms compiled in over 20 years with over 500,000 units sold.

Unique Features:

Advanced Access Control features in each unit

- User Identification – Authorized users can receive exclusive access.
- Position Management – The padlock will only open in designated areas. For example, delivery trucks will be unlocked only within the customer's warehouse and only by authorized personnel.
- Time Management – You can restrict the padlock to be opened only during the store/factory opening hours.

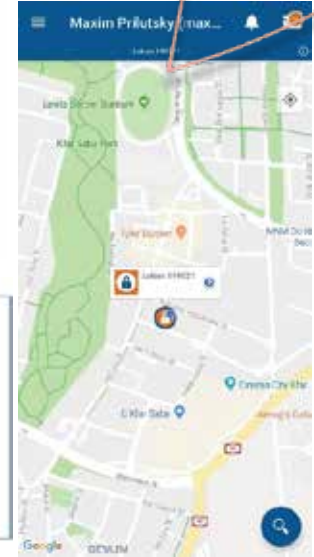

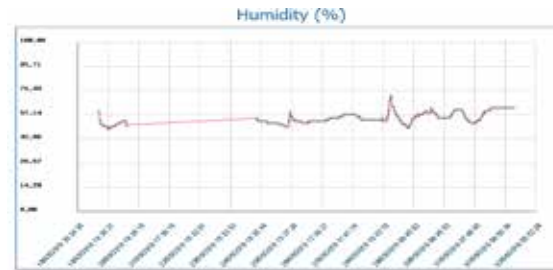

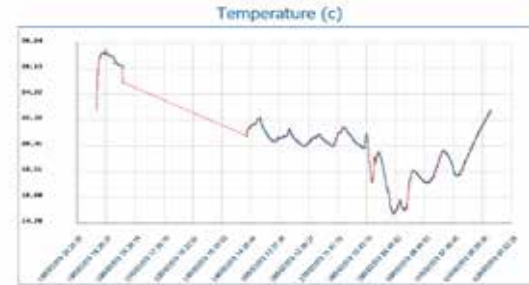

Breach detection – A unique technology to detect any breach or cutting of the shackle.

Flexibility – An option for a flexible shackle in any desired length.

IoT capabilities and BLE connectivity – Can connect to nearby sensors.

- Lokies is equipped with BLE (Bluetooth Low Energy) connectivity, which turns the padlock into an IoT system.
- Can connect to external sensors:
 - Light Exposure – Detecting of breach, which isn't done through the door. Allowing the connection to a wireless light sensor, inside the container/truck/warehouse.
 - Humidity – For the monitoring and maintaining of the product, by alerting on increase or decrease in humidity.
 - Temperature – Alerts on a possible rise in temperature due to a fire for example.
- Connection of multiple padlocks through BLE with one central unit.

Managing your Lokies

- On-line access anywhere, any time.
- Real-time data.
- Ability to capture valuable data for future planning
- Personalized and customized notifications.
- Automatically generates reports on a daily/ weekly/ monthly basis, with specified data.
- All-in-one solutions for entire range of devices.

Mobile Application

- Tracking in the palm of your hand.
- Fast and user-friendly interface.
- Instant notifications with any irregular event.
- Available for both iOS and Android-based devices.
